

Use case	Access sensory data in real time
Summary	The user could view real-time environmental data passed from sensor
Pre-condition	The user has already registered and set up the hardware
Post-condition	System presents related data to the user
Base sequence	1.User chooses to view sensory data. 2.User views all sensory data(air temperature, air humidity, air carbon dioxide, light level, etc)
Exception	Sensory data not able to be visualized due to technical errors
Note	All the data is real-time, so the user won't have to do anything to view changing data.
